DPRK'S INVESTMENT POLICY AND ITS ENVIRONMENT

It is a consistent policy of the government of the Democratic People's Republic of Korea to expand and develop economic cooperation with many countries of the world.

Since the first day of its foundation the government has so far strengthened economic and cooperative relations with different countries and encouraged foreign investment in the form of equity and contractual joint ventures.

And it has enacted and amended investment-related laws and regulations in line with the requirements of the developing reality so as to attract investment from foreign entrepreneurs.

The Socialist Constitution of the DPRK stipulates that the State shall encourage institutions, enterprises and organizations in our country to establish and conduct various forms of businesses including equity and contractual joint ventures with corporate bodies or individuals in foreign countries.

Most recently the government has taken a series of measures to bolster up economic cooperation with other countries and facilitate direct investment of foreign investors.

It allows foreign entrepreneurs to make direct investment in different fields of the economy, including industry, agriculture, construction, transportation, science and technology, tourism, finance and public health, and encourages their investment in the sectors of cutting-edge technology, resource development, infrastructure construction, scientific research and technological development.

The adoption of foreign investment-related laws and the conclusion of bilateral and multilateral agreements on encouragement and protection of investment and agreement on prevention of double taxation levied on properties and income have made it possible to provide a government guarantee for encouraging investment of foreign entrepreneurs and protecting their properties.

It also provides foreign investors with favourable conditions and preferential treatments for securing the interests of foreign-invested enterprises, including those for restricting and prohibiting the establishment of other foreign enterprises which intend to turn out same goods as produced by foreign entrepreneurs that are in full operation in terms of production indices and scale, and qualitative conditions.

In addition, it has taken measures for encouraging investment such as simplifying of procedures for foreign-invested enterprises and enlargement of investment fields with no limitation on proportion of their contribution.

All sorts of political, economic and socio-cultural conditions advantageous for foreign investment are ensured in the DPRK.

Socio-political stability, comprehensive economic foundations and its potentials, reliable infrastructure for smooth operation of business activities, geopolitical conditions for easy access to vast consumer markets, rich manpower and a large number of promising enterprises and competent technicians, low tax rate, a few kind of taxes and abundant resources provide an attractive environment for investment.

Today external economic exchange and cooperation in the DPRK are developing day after day.

Foreign-invested businesses including equity and contractual joint ventures are progressing in high gear and the project for developing special economic zones is making good headway.

Many of joint venture companies have registered tangible successes in their businesses and maintained their credit in contract obligations.

Economic and trade businesses at the Rason Economic and Trade Zone and the Kungangsan tourism area are also being improved so rapidly.

Of late, the DPRK government adopted and promulgated the Law on Economic Development Zone for the purpose of further promoting external economic relations with different countries of the world as suited to the developing trend of the global economy and actual conditions of the country.

Pursuant to this law, the project for establishing one or two economic development zones in each province is being pushed ahead with under a long-range program, in due consideration of its natural and geographical conditions and its foundations of economic development.

Economic development zones shall, in principle, be set up in the areas advantageous to external economic collaboration and exchanges and the areas contributive to development of the country's economy, science and technology according to the State strategy of economic development, and the areas that provide foreign investors with sufficient conditions under which they will develop and operate individually or jointly with the consent of the State.

The long-term and detailed plans for development have been drawn up to establish economic development zones and various activities for investment attraction are now in progress, including the International Conference on Special Economic Development Zone and meetings between business partners in Pyongyang and on-site inspections.

The ever-developing external economic relations of the DPRK government are optimistic.

In future, the government continues to expand and bolster up friendly relations with all the countries on the principles of equality and mutual benefit under the ideal of independence, peace and friendship.

Summary of Equity Joint Venture Law

The Law of the Democratic People's Republic of Korea on Equity Joint Venture contributes to expanding and developing economic cooperation and technical exchange between the DPRK and other countries that wish to establish an equity joint venture.

The law on equity joint venture was adopted by Resolution No.10 of the Standing Committee of the Supreme People's Assembly of the DPRK on September 8, Juche 73(1984), and amended and supplemented by Decree No.1993 of the Presidium of the Supreme People's Assembly on November 29, Juche 100(2011).

The law stipulates its fundamentals and several issues arising in operation of equity joint venture enterprises, including establishment, organizational structure, management, settlement of accounts and distribution, dissolution and settlement of disputes.

It specifies that institutions, enterprises or entities of the DPRK can establish an equity joint venture with enterprises, corporate bodies or individuals of other countries under the approval of the central guidance organ and equity joint ventures may be effected in the fields of electronics, machine-building, science, technology, light industry, agriculture, forestry, fishery, building-materials, transport, finance, infrastructure construction and others.

An equity joint venture enterprise shall conduct its business activities in conformity to this law and any matter which has not been covered by this law is subject to the relevant laws and regulations of the DPRK.

The investor shall send to the relevant authorities the detailed documents about the application for the incorporation of the equity joint venture enterprise, inauguration day, registration of its address and tax, share of contribution, transfer and succession of its share, investor's assets and property rights, establishment of branches, agencies or representative offices, merger of enterprises, period of investment, investment proportion of intellectual property rights and registered capital.

Institutions, enterprises or organizations of the DPRK and foreign investors which intend to run or operate an equity joint venture should, after consultation with the relevant authorities, submit to the central trade guidance organ the application for the incorporation of an equity joint venture enterprise, accompanied with the memorandum of the equity joint venture enterprise, a copy of the contract, feasibility study report and so on.

The central trade guidance organ should decide whether to approve or reject the application within 15 days after its receipt. The date of its registration should be the inauguration day of the equity joint venture enterprise.

An equity joint venture enterprise may, with the consent of the central economic and cooperative management organ, open its branches, agencies or representative office in and out of the territory of the DPRK and merge the corporations or enterprises of foreign countries.

The law stipulates the position and power of the board of directors, management personnel, appointment and dismissal of an auditor, standard for the management, operation period, business licence, purchase of materials needed for operation, the sale of products, taxation on an equity joint venture enterprise, categories of an equity joint venture enterprise, and management and use of labour.

It also provides the account of an equity joint venture enterprise, loan, financial management and accounting, insurance of an equity joint venture enterprise and provision of conditions for activities of the labour union.

It stipulates the major issues concerning the amendment to the memorandum, measures for the development of the enterprise, planning of business activities, settlement of account and distribution, payment and reduction of tax, reinvestment of profits and overseas remittance of profits, together with grounds for dissolution of an equity joint venture enterprise, termination and extension of its operation period, grievance and its settlement and settlement of disputes.

The DPRK will make a tangible contribution to expanding and developing economic and technical cooperation and exchange with different countries over the world by establishing a strict system and order in equity joint venture.

Cast Iron Manufacturer

The Songun Iron Foundry newly built at the Ryongsong Machine Complex in August 2010 is a production centre of giant castings.

Its production processes ranging from feed of raw materials to sand mixing, moulding, melting and desanding are all computer-controlled.

Equipped with up-to-date machines, including jolt squeeze moulding machine, core-making machine, 1-ton, 3-ton and 5-ton medium-frequency induction furnaces, iron casting car and large-sized vibrating desanding machine, it turns out several hundred kinds of small- and large-sized castings to meet technical requirements such as surface finishing.

The foundry whose production processes have been modernized on a high

standard plays a major role in producing various kinds of castings badly needed in machine-building industry at home and abroad and ensuring the standardization of castings.

Under the scientific business strategy, it is focusing its attention on producing larger quantities of quality castings and receiving the order for processing of castings from foreign clients through vigorous promotion of cooperation and exchange with them.

Sinphyong Tourism Development Zone

The establishment of the Sinphyong Tourism Development Zone has been proclaimed by the Decree No. 3450 of the Presidium of the Supreme People's Assembly of the Democratic People's Republic of Korea on November 21, 2013.

The zone is situated in Phyonghwa ri, Sinphyong County, North Hwanghae Province between Pyongyang and Wonsan.

We are going to introduce the present situation of the development zone in order to further the understanding of foreign tourists and investors.

The reserve of the zone is an area of more than 4 500 hectares of which Nounpho, Chongsokjong and Tohwadong valleys and other main spots cover an area of 2 600 hectares.

The Sinphyong Kungang zone situated in the deep forest of Ahobiryong Range stretched from central Korea boasts of a picturesque scenery of Tohwadong Valley running through both sides of Tohwa River as the centre in 38° 5' lat. North and 126° 46' long. East.

Eight public buildings including service facilities, 20kw- and 100kw-capacity hydraulic power plants, three pavilions, four observation posts and over 8-km-long sightseeing road and mountaineering path have been built in the zone. There are also the Sujong (crystal) Mineral Water Factory, a holiday resort and Tohwadong Village.

Mts. Huiyang and Saengwang which sea levels are 740m and 852m respectively and other picturesque mountains unfold their scenic beauty, crystal-clear water flows along each of valleys and the mean sea level of the place is over 600m. Therefore, the place is a most ideal and suitable cultural resting place for physical fitness and summer resort.

The zone has a various kind of flora such as 40 kinds of trees including pine-nut tree, oak, pine, chestnut, black walnut, maple and azalea, medical and edible herbs and delicious and nutritive mushrooms.

20 species of animals such as bear, wild boar, roe deer, pheasant and woodpecker inhabit in the

forest and a various kind of fish such as carp, goldfish, catfish and minor live in the Tohwa and Nam rivers.

The Chongsokjong Valley consists of mysterious rocks and cliffs standing on both sides of the Nam River, Tributary 1 of the Taedong River. Among them are Kwil (ear) and Choidae (candle) rocks which tell the people an edifying story. Mysterious cliff, blue water flowing along the valley and waterfalls that give a feeling of excitement and refreshment to the people, prove fascinating and mysterious scenery of the Tohwadong Valley.

In autumn the whole Tohwadong Valley, peaks and dells, is ablaze with autumnal tints.

There are over 70 scenic spots including mysterious rocks and

cliffs such as Thokki (rabbit) and Kobuk (turtle) rocks and waterfalls such as Noun, Tanphung and Kungang waterfalls in the Tohwadong, Nounpho, Kungangphokpho and Okryulae valleys and other scenic places.

As abovementioned the Sinphyong Tourism Development Zone has all the necessities for a tourist resort and is under development according to the prospective development plan.

Boa Immunoinvigorating Injection

국립보건연구원
天蟾免疫复活注射液

Boa Immunoinvigorating Injection is a specific remedy for activating the function of organism which is prepared by extracting and separating low-molecular peptide and amino acids from boa by means of sophisticated technology. They have a peculiar pharmacological effect on the system. It helps regenerate and regulate immunity and metabolism, invigorate the proliferation of tumor cells and improve nutrition lesion. It is free from side effects and toxicity.

When boa preserved in alcohol or ice taffy is used as a medicine, low-molecular peptide is not easily absorbed into the system through a gastrointestinal tract but this injection is prepared so that its peptide is to be completely absorbed into it. Accordingly, it produces a remarkable effect which cannot be obtained by other medicines in treating incurable disease and shows marvelous effects in improving mental and physical ability, enhancing skin beauty and retarding aging.

In particular, it is highly efficacious for treatment of prostatic and resistant tuberculosis caused by administration of various drugs that are acknowledged currently as obstinate diseases, and sexual dysfunction manifested in those of middle age or over.

Composition: 0.001g of purified extract of boa for one ampoule (2ml)
Indication: Tubercular diseases, gynecopathy, skin diseases, endocrineopathy, etc.
Dosage: For adults... 2 ampoules each, once a day by intramuscular injection
 For children... 1 ampoule each, once a day by intramuscular injection. In severe cases, 2 ampoules each, two times a day.
Packing: 2mlx10 ampoules or 2mlx30 ampoules per box.

Production of Dry Building Materials

The Korea Milyong Joint Venture Company established in May 2007 is a professional firm of dry building materials run by joint investment with the Zhongqiao Mining Co Ltd, Zhejiang, China.

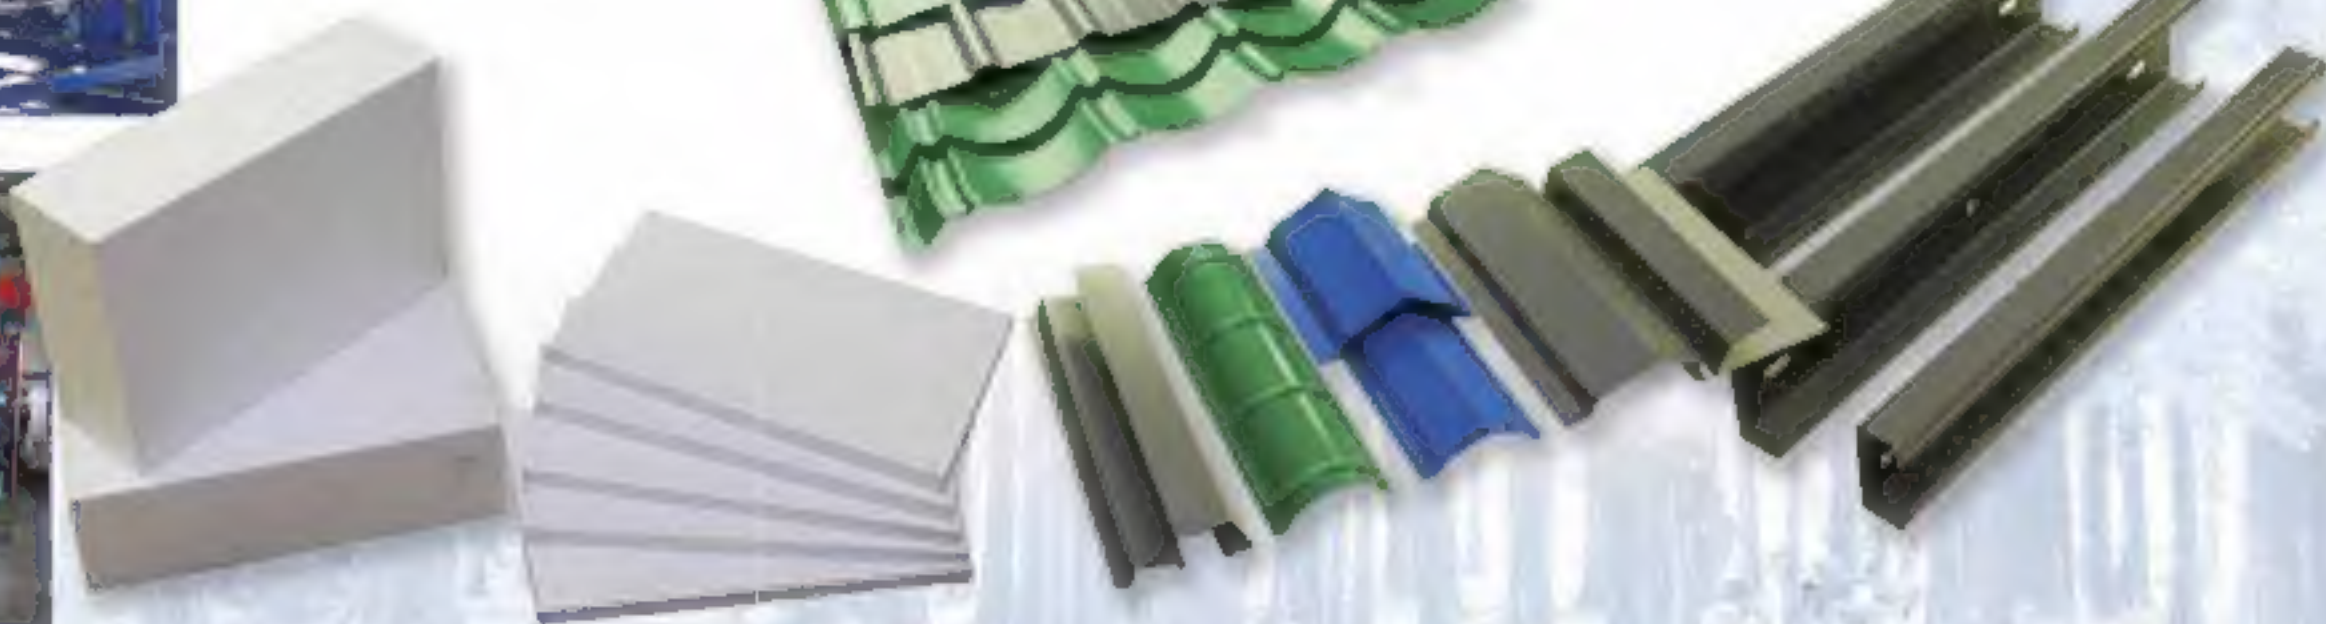

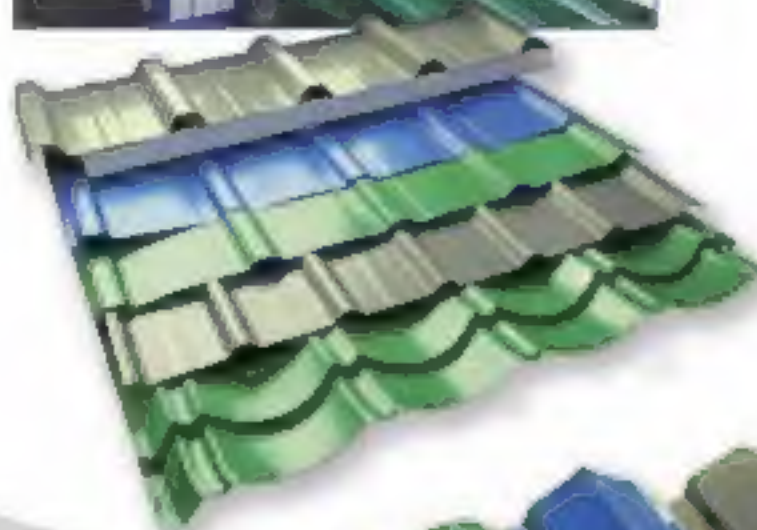

Its main products include roofing materials, heatproof composite panels, C- and I-shaped steel, foamed plastic and other dry building materials.

As it is equipped with up-to-date flow-line system from feeding of raw materials to finishing of products and staffed with competent technicians who are well versed in different fields, the company can fully satisfy the clients' order for such businesses of construction projects as field inspection, designing and installation.

Colour-painted, corrugated roofing plates which are treated with corrosion-proof agent on galvanized iron plates and then painted with polyester are available in different colours and shapes.

Beam and beamless arched roofing plates are also principal products of the company. Beamless arched roofing plates are widely used in big buildings without roof truss which take up a wide space and beam arched roofing plates in outdoor establishments that require the installation of truss.

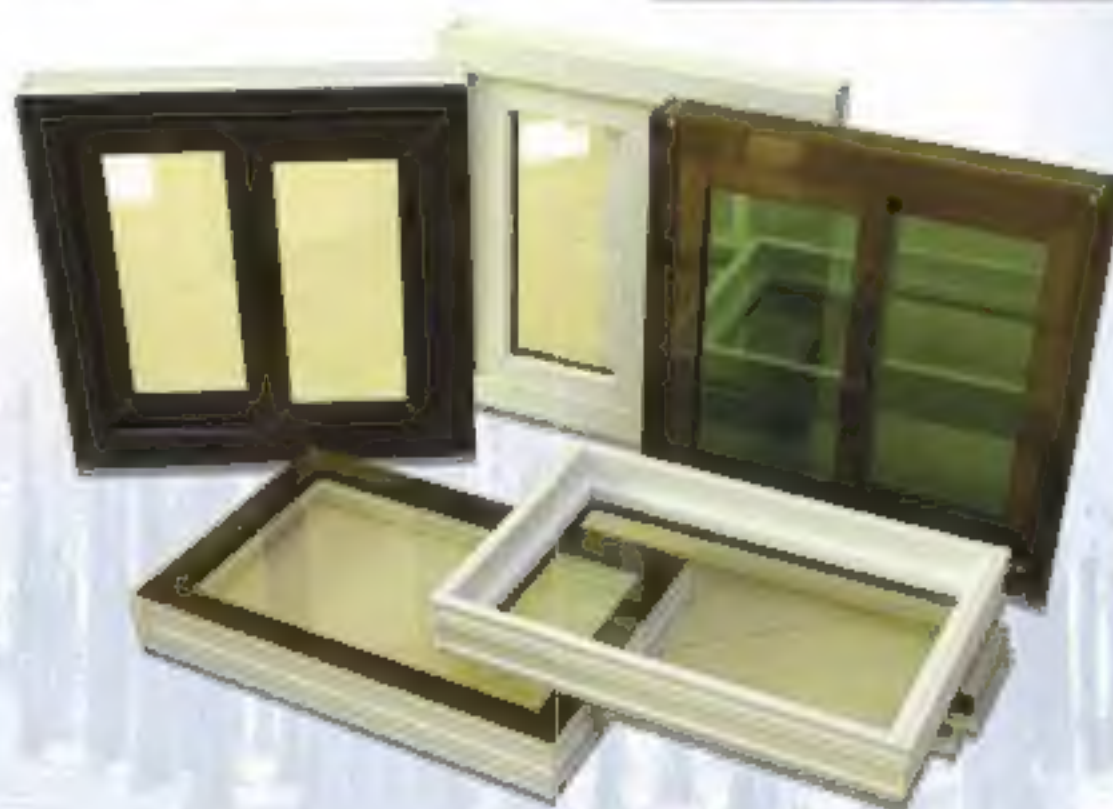

Heatproof complex roofing panels and wall panels which are made of colour-painted steel plate with foamed plastic board as its core are available in different thickness according to use.

C-shaped steel, a structural section made of roll-formed steel of various sizes, is more durable and easier for installation and lighter in weight than those of angle or channel steel, while enhancing bearing power of steel structures.

The Korea Milyong Joint Venture Company will make every endeavour to mass-produce a wide variety of high-quality dry building materials on the credit-first principle.

Fine Quality Paints

The Pothonggang Trading Corporation is engaged in production and sale of a wide range of paints, including anti-corrosive paints for vessels and steel structures, wall paints and floor paints.

Provided with automatic flow line system with an annual output of several thousand tons, the corporation guarantees high quality of paints which accord with national and international standards.

Water glass-denatured methacrylic acid paint for ship's bottom is an innocuous anti-corrosive, anti-fouling paint produced in conformity to International Convention on Control of Noxious Anti-fouling Paint System of Ship (AFS) adopted at the International Environment Protection Organization and the International Maritime Organization (IMO) in 2001. The service life of its anti-fouling effect is three years and that of anti-corrosive effect more than ten year, so that this paint enjoys popularity among buyers.

Its wall paint has been widely used in major projects for their diverse colours, decorative effect and superior quality and its anti-corrosive paint for steel structures and varieties of functional paints, including epoxy resin floor paint are in growing demand for their wide applications.

Besides, the corporation produces and sells gypsum for interior decoration, paint for ornamental pattern, glass tiles, functional tiles and paving blocks.

Supported by a promising R&D group, it is making strenuous efforts to introduce the cutting-edge technology and put its production on a modern footing.

The corporation does its best to strengthen many-sided cooperation and exchanges with counterparts in the development, production and export of new products.

HAMHUNG DISABLED SOLDIERS' PLASTIC DAILY-NECESSITIES FACTORY

The Hamhung Disabled Soldiers' Plastic Daily-Necessities Factory situated in Hamhung, South Hamgyong Province turns out a wide variety of plastic daily necessities

needed in different sectors of the economy and for the betterment of people's livelihood.

The factory is composed of main workshops such as those of roller, synthetic resin, injection-moulded boots, raincoats and bags, and a repairs and power-supply workshop.

The modernization of its production processes has made it possible to produce diverse kinds of quality consumer goods in larger quantities, while lowering the norms for the consumption of materials per unit and, thus positively contribute to the people's living standards.

It has a strong technical force for R&D, blueprints and design of new articles that

belly the contemporary trend of the times and the customers' liking. Its raincoats and injection-moulded boots are very popular among clients for their diverse styles and colours and high

quality.

The factory is making every effort to mass-produce popular articles and make inroads into overseas markets.

Misan Architectural Decoration Company

The Misan Architectural Decoration Company that was set up in 2009 is a renowned enterprise specializing in finishing decoration of architectures.

It is composed of several sections, including that of laying out blueprint and design of architectures and developing finishing building materials, that of manufacturing interior decorations and finishing building materials and undertaking building operations and that of conducting trade business.

In a good combination of design, building operations and building materials, three elements of construction, the company is paying a close attention to improving R&D and building operations of energy-saving architectures, such as heat-preserving buildings, power-saving green building materials for illumination and the greening of buildings to suit the developing trend of green architectures on the principle of giving precedence to convenience and aesthetics in all construction work.

In the past it has developed new forms of architectural blueprints, new methods of civil engineering and architectural decoration in which all factors essential to human life including people's material needs, their way

of life, feeling and sentiments are reflected in an all-round way in keeping with the requirements of the times, and introduced them into reality.

The company has also greatly contributed to erecting numerous structures of lasting value in which both formative and artistic qualities are thoroughly guaranteed.

In future it will upgrade architectural blueprints and decoration designs and improve building operations in line with the ever-increasing needs of contemporary architectures and strengthen exchanges and cooperation in this field.

Unjong Tea that has been enjoyed by the people for its fragrant aroma and sweet flavor.

The tea is a pollution-free, green beverage which is cultivated in Kangryong County, South Hwanghae Province and Kosong County, Kangwon Province endowed with fresh air, crystal-clear water and mild climate.

Nowadays, Unjong Tea (Kangryong and Kosong green tea and black tea) is getting popular among the people.

The tea contains a large amount of catechin, amino acids and vitamins C and A.

As a non-alcoholic beverage containing caffeine, it helps purify the blood, facilitate blood circulation and relieve the tension of blood vessels, thus being efficacious for preventing cancer, hypertension, cerebral thrombosis, arteriosclerosis, cholecystitis, kidney trouble, cystitis and lithiasis. Regular drinking of it shows a splendid effect on those who are suffering from obesity and are overemotive.

As any chemical compounds and impurities are not added to it, it presents peculiar taste. Put 3g of tea into a tea cup, pour hot water of over 85°C and then drink half five minutes later, pour hot water again and drink it three minutes later.

Unjong Tea is most welcomed by the people as a table luxury good for health.

Moari Shooting Gallery

The Moari Shooting Gallery situated in Chongchun Street, Pyongyang, has several shooting ranges, archery grounds, electronic recreation hall, outdoor playground, restaurant and other sports and service facilities.

The indoor shooting gallery has a 50-m range for rifle shooting and 25-m range for pistol shooting with 8 platforms respectively.

Each platform has a scoreboard, and each range the seats and a general scoreboard so that visitors can see others shooting and their results.

In the outdoor shooting range there are 12 platforms, five for 25-m pistol shooting and another five for 50-m rifle shooting. The other two, platform 11 and platform 12 are for shooting moving pheasants and chicken in the distance of 50 metres.

If they want to learn shooting in advance the visitors can acquire all technical requisites like shooting position, holding weapons, breathing and firing at the education room.

The indoor 30-m archery ground on the first floor resembles a forest in natural beauty.

Ray-gun and electron-gun ranges are popular among the children and young people as they produce a lifelike effect of shooting as suited to the latter's psychological features.

Classes of amusement facilities are installed in the electronic recreation hall.

Every place in the gallery including a restaurant, shop and resting places, is designed to provide visitors with maximum convenience so that visitors can enjoy themselves to their heart's content.

Those interested in the Moari Shooting Gallery can contact to the Korea Rokaan General Trading Corporation.

Plastic Pipes From HJVC

The Haeryong Joint Venture Company incorporated in 2007 is a specialized manufacturer of plastic pipes.

The company is now in a position to mass-produce polypropylene pipes for cold and hot water (PP-R), polyethylene pipes for floor heating (PE-RT) and water supply (PE-100), and rigid polyvinyl chloride pipes for general application (PVC), cable protection (PVC) and

drainage (U-PVC), and a wide range of joints and fittings.

Noncrystalline polypropylene pipes (PP-R) and their joints and fittings, and heatproof polyethylene pipes (PE-RT) have received certificates of registration for introduction of sophisticated technology.

Its main products include plastic pipes of $\phi 20$, 25, 32, 40, 50, 63, 75, 90, 110, 126, 140, 160, 200, 250, 315, 400 and 450 mm, couplers of 17 kinds, T-joints of 14 kinds, elbows of 8 kinds and other kinds of joints and fittings.

With an annual output of millions of metres of plastic pipes and hundreds of thousands of pieces of joints and fittings, its affiliated plastic pipe factory is provided with several flow lines of plastic pipes and its equipment in all processes, ranging from feed of raw materials to finishing is operated by PLC control system.

All its products have been so far used in hundreds of

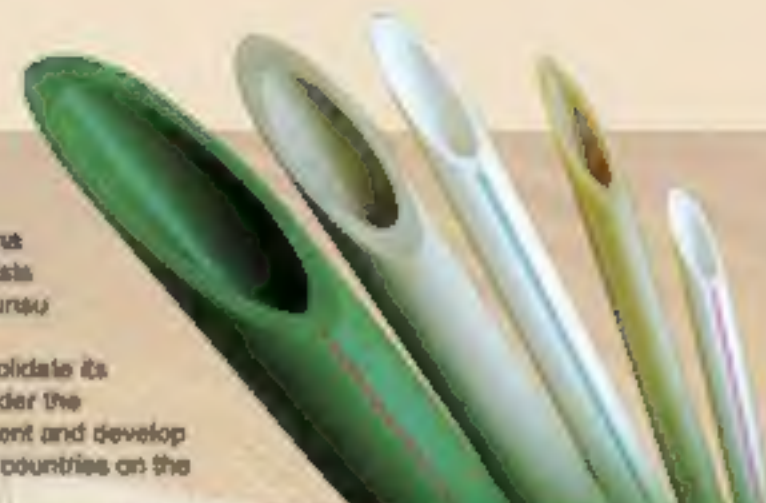

construction projects, including Rungna People's Pleasure Park, Unha Scientific Street, Masikryong Ski Resort and Munsu Water Park.

The company does its best to consolidate its material and technical foundations under the forward-looking strategy of management and develop exchange and cooperation with other countries on the credit-first principle.
